DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,8,9,10,19,20,21,23,26,31,32,34 are rejected under 35 U.S.C. 102(b) as being anticipated by Fry (US 6,127,661 of record).

The reference by Fry discloses an ovenized(thermally insulated chamber) for controlling the temperature of a quartz crystal resonator(14), see figure 1, and col. 7, lines 10-50. A micro-controller(20), sensors(16,17), and heater(18), allow for temperature cycles to be applied and monitored for the resonator, and the “ B” mode(temp. rate) frequency operational characteristic of the crystal is measured during the temperature cycles. Data is collected(grouped) and used to correlate(calculate) the thermal characteristic for the specific oscillator assembly(crystal oscillator). Once calibrated, see lines 45-50, a temperature run is performed (“ real time”) to fine tune thermal gain and thus the desired operational frequency for a particular temperature(temperature dependent frequency). The method steps being inherent to the system as above.

Allowable Subject Matter

3. Claims 2-7, 11-18, 22, 24, 25, 27-30 and 33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The examiner could not find fair suggestion for the interpolation/extrapolation to derive missing points on a surface as well as defining such a surface in three dimensions using the grouped parameters...using the system subsurface was not suggested.

Response to Arguments

4. Applicant's arguments filed 09-19-05 have been fully considered but they are not persuasive. The examiner has considered applicants remarks with regards the monitoring of temperature with respect to space...and not with respect to time..This has been noted, but the claims rejected do not reflect this and further the reference relied upon does measure temperature over a period of time inherently(a temperature run is performed (" real time"))...as noted in the rejection.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 2817

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
